

SUMMARY

Financial perspectives of the European Union in 2007-2013 years, in spite of the obvious developmental chance for Poland, as you constituted the big challenge without a doubt for her regions. Thanks to integration with the European Union Poland gained access to the new financial means, intended to the local development. There is no doubt that the special nature of sport and her social functions should be taken into account by every Member State and the European Union. Local authorities and regional should develop activity in the physical culture on every level and promote the knowledge to her subject. Self-governments should provide the access to sport's infrastructure for the inhabitants, because they are managing the majority of the public sports infrastructure. Moreover thanks to these operations they will contribute to propagate the healthier lifestyle and for practicing sport.

In theoretical considerations of this work a major part of the sports-recreational infrastructure in creating the active lifestyle was presented. Moreover findings of conducted researches are indicating in 11 gminas of the Silesian voivodeship that, mainly children and teenagers including persons with motor limitations are users of school sports facilities funded partially from financial and european means. It belongs to underline one more time that the systematic physical activity is a basic component of the healthy's lifestyle.

The author of the work hopes that this work will become an inspiration for sports circles for undertaking further research in favour of the sports-recreational infrastructure funded partially from European centres in 2007-2013 years, but with the activity of sport not only in the Silesian voivodeship, but also in Poland.
